

Appendix B
Clean Version of the Claims

1. (Amended) A bone plating system for fixation of bone comprising:
a bone plate having:
an upper surface;
a bone-contacting surface;
at least one first hole passing through the upper and bone-contacting surfaces
and having a thread; and
at least one non-threaded second hole passing through the upper and bone-
contacting surfaces;
a first screw having a shaft with a thread for engaging bone and a head with a thread
configured and dimensioned to mate with the thread of the first hole; and
a second screw having a shaft with a thread for engaging bone and a non-threaded
head, wherein the first and second screws remain seated in their respective holes for
substantially as long as the bone plate is implanted.
2. The bone plating system of claim 1 wherein the bone plate includes a plurality
of first and second holes, and a corresponding plurality of first and second screws are
provided.
3. The bone plating system of claim 1 wherein the first screw is a self-tapping
screw.
4. The bone plating system of claim 3 wherein the first screw is a self-drilling
screw.
5. The bone plating system of claim 1 wherein the first screw is cannulated for
insertion of a guide wire to guide screw placement.

6. The bone plating system of claim 1 wherein the second screw is a self-tapping screw.
7. The bone plating system of claim 1 wherein the first plate hole has a substantially conical shape.
8. The bone plating system of claim 7 wherein the first plate hole has a double-lead thread.
9. The bone plating system of claim 1 wherein the bone plate has a trapezoidal shaped cross section in regions between the first and second plate holes for minimizing contact between bone and the bone-contacting surface.
10. The bone plating system of claim 2 wherein at least one of the second plate holes is longitudinally elongated and has an edge inclined at an angle to the upper surface toward the bone-contacting surface for displacing the bone plate when engaged by the head of a second bone screw.
11. The bone plating system of claim 2 wherein the bone plate includes a head portion configured and dimensioned to conform to a metaphysis of a bone and a shaft portion configured and dimensioned to conform to a diaphysis of a bone.
12. The bone plating system of claim 11 wherein the head portion has only first plate holes.
13. The bone plating system of claim 11 wherein the shaft portion has both first and second plate holes.
14. The bone plating system of claim 11 wherein the head portion has a curved surface, includes an anterior fork substantially parallel to an anterior side of the shaft portion, and includes a posterior fork extending out from a posterior side of the shaft portion.

15. The bone plating system of claim 11 wherein the shaft has a trapezoidal shaped cross section in regions between the first and second screw holes for minimizing contact between bone and the bone-contacting surface.

16. The bone plating system of claim 11 wherein the head portion flares outward from the shaft.

17. The bone plating system of claim 15 wherein the head portion is provided with suture holes.

18. A method for fracture fixation of bone comprising the steps of:
reducing the fracture to bring bone fragments in close apposition;
compressing a bone plate against the bone with at least one first fastener to hold the fracture reduction; and
securing at least one second fastener at a fixed angular relationship to the bone plate, wherein the at least one first fastener is inserted before the at least one second fastener and the at least one first fastener and the at least one second fastener remain in bone for substantially as long as the bone plate is implanted.

19. (New) The method of claim 18, wherein the fracture is a peri-articular fracture.

20. (New) The method of claim 18, wherein the fracture is adjacent at least one of the following group: a distal tibia, a proximal tibia, a distal femur, or proximal femur.

21. (New) The method of claim 18, further comprising securing at least one third fastener at a fixed angular relationship to the bone plate, wherein third fastener is fixed at a different angular relationship to the bone plate than the second fastener.

22. (New) A bone plating system for fixation of bone comprising:
a bone plate having:
an upper surface;
a bone-contacting surface;

at least one first hole passing through the upper and bone-contacting surfaces and having a thread; and

at least one second hole passing through the upper and bone-contacting surfaces;

a first screw having a shaft with a thread for engaging bone and a head with a thread configured and dimensioned to mate with the thread of the first hole; and

a second screw having a shaft with a thread for engaging bone and a head, wherein the first and second screws remain seated in their respective holes for substantially as long as the bone plate is implanted, and

wherein at least one of the second hole and the second screw head is non-threaded, such that second screw head does not threadedly engage the second hole.

23. (New) A bone plating system for fixation of bone comprising:

a bone plate having:

an upper surface;

a bone-contacting surface;

at least one first hole passing through the upper and bone-contacting surfaces and having a thread; and

at least one second hole passing through the upper and bone-contacting surfaces;

a first screw having a shaft with a thread for engaging bone and a head with a thread configured and dimensioned to mate with the thread of the first hole; and

a second screw having a shaft with a thread for engaging bone and a head, wherein the first and second screws remain seated in their respective holes for substantially as long as the bone plate is implanted,

wherein the bone plate includes a plurality of first and second holes, and a corresponding plurality of first and second screws are provided, and

wherein the bone plate includes a head portion configured and dimensioned to conform to a metaphysis of a bone and a shaft portion configured and dimensioned to conform to a diaphysis of a bone and the head portion has only first plate holes.
